Patarimai

- Visada laikyk „keep the product identical and legible“, kad produktas nesikeistų ir etiketė liktų įskaitoma.
- Viena vientisa nuotrauka, ne koliažas, ne plokščias spalvos blokas.
- Jei rezultatas plokščias, promptly sustiprink foną (marmuras, akmuo) ir šviesą (soft directional light, reflections).

- GPT Image arba Nano Banana Pro geriausiai tvarko lietuvišką tekstą. Jei diakritikai lūžta, baik Canvoje.
- Fonus maišyk: marmuras, medis, betonas, palangė, studija, lauke.
